Market Tracking Web App

MarketTrackingWeb

MarketTrackingWeb is a Streamlit-based web application that helps users track and visualize financial market data across various asset classes. The application provides performance tracking for world indices, equities, fixed income, commodities, and cryptocurrencies, with customizable tracking features.

Features

- **Multi-Asset Class Tracking:** Monitor performance across diverse asset classes
- **Interactive Data Visualization:** View performance changes across different time periods
- **Customizable Tracking:** Add your own ticker symbols to track specific assets
- **Comparative Analysis:** Heatmap visualization showing relative performance
- **Real-time Data:** Uses Yahoo Finance API to provide up-to-date market information

Installation

Setup Instructions

1. Download the ZIP file and extract it to your preferred location
2. Create a virtual environment and activate it:

```
# On Windows
python -m venv .venv
.venv\Scripts\activate

# On macOS/Linux
python -m venv .venv
source .venv/bin/activate
```

3. Install the required dependencies:

```
pip install -r requirements.txt
```

Note: If a requirements.txt file doesn't exist, create one with the following content:

```
streamlit
pandas
numpy
yfinance
matplotlib
plotly
```

Running App

Running the Application

After installation, you can run the application using the following command:

```
streamlit run app.py
```

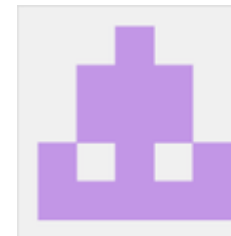

The application will start and open in your default web browser at `http://localhost:8501`.

```

Key Components

Key Components

- `app.py`: The main application file containing the Streamlit UI code and application logic
- `calculations.py`: Contains utility functions for data retrieval and calculations
- `Ticker.json`: A configuration file that defines the asset categories and their corresponding ticker symbols
- `table_template.html`: HTML template with CSS styling for the data visualization tables

Usage

Development by

Zeroptj - Overview

Zeroptj has 2 repositories available. Follow their code on GitHub.

 GitHub

Usage

Usage

1. Launch the application using the command mentioned in the "Running the Application" section
2. Use the sidebar to select the asset class you want to track (World Index, Equities, Fixed Income, etc.)
3. For Equities, you can further select between Region and Sector views
4. In the "My Tracking" section, you can add your own ticker symbols from Yahoo Finance to track specific assets

Data Sources

The application uses the `yfinance` library to fetch financial data from Yahoo Finance.

Customization

Customization

You can customize the tracked assets by modifying the `data/Ticker.json` file. The file organizes assets by categories and subcategories, making it easy to add or remove assets as needed.
